

Protein Sequence

```
graph TD; A[Protein Sequence] --> B[Pre-computed Features Lookup]; subgraph B [Pre-computed Features Lookup]; C[Cached ESM-2 Embedding]; end; B --> D[Trainable Projection Head]; subgraph D [Trainable Projection Head]; E[Linear Layer] --> F[Layer Normalization]; F --> G[ReLU Activation]; end; D --> H[Final Protein Representation Vector];
```

The diagram illustrates a sequential process for protein representation. It begins with a 'Protein Sequence' box, which leads to a 'Pre-computed Features Lookup' section containing a 'Cached ESM-2 Embedding' box. This section then leads to a 'Trainable Projection Head' section, which contains three stacked boxes: 'Linear Layer', 'Layer Normalization', and 'ReLU Activation'. Finally, the output of the 'ReLU Activation' box is the 'Final Protein Representation Vector'.
